EVENTFORCE MANAGEMENT SYSTEM-SALESFORCE IMPLEMENTATION

User Story:

The EventForce Management System is designed to provide a centralized Salesforce-based solution for managing event planning operations, including client bookings, event scheduling, venue reservations, vendor coordination, cancellation approvals, reminders, and feedback collection. The system enables event teams to manage Events, Clients, Vendors, Venues, and Feedback using a structured Salesforce data model with appropriate relationships. Automated Flows handle event reminders and process updates, while an Approval Process manages event cancellation requests. Apex Classes and Triggers support advanced business logic such as venue availability updates and prevention of double bookings. A Lightning App, Reports, and Dashboards provide real-time visibility into event schedules, vendor activities, and operational performance. This initiative improves event management efficiency, booking coordination, data accuracy, communication, operational visibility, and customer experience.

1. INTRODUCTION

1.1 Project Overview

The EventForce Management System is a Salesforce-based CRM solution developed to centralize and streamline event planning and management operations. The system manages clients, events, venues, vendors, feedback, and event cancellations within a structured Salesforce platform.

The solution uses custom objects, relationships, validation rules, Flows, Approval Processes, Apex Triggers and Classes, Reports, and Dashboards to automate key business processes. It supports venue availability management, prevention of double bookings, automated event reminders, cancellation approvals, feedback management, and operational reporting. The project aims to reduce manual effort, improve booking coordination and data accuracy, enhance communication with clients and operational teams, and provide better visibility into event activities.

1.2 Purpose

The purpose of the EventForce Management System is to provide a centralized Salesforce platform for managing and automating event planning operations. The system is designed to:

- Centralize client, event, venue, vendor, and feedback information.
- Streamline event booking and venue reservation processes.
- Prevent double booking of venues through automated Apex logic.
- Automate event reminders and cancellation approval processes.
- Improve coordination between clients, event coordinators, vendors, and venue managers.
- Provide reports and dashboards for better operational visibility and decision-making.
- Reduce manual processes, improve data accuracy, and enhance the overall client experience.

2. IDEATION PHASE

2.1 Problem Statement

Customer Problem Statement Template:

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Event Operations Manager	manage event planning operations efficiently	client, event, venue, and vendor information is difficult to manage centrally	event management activities require coordination across multiple areas	frustrated and concerned
PS-2	Event Coordinator	create and manage event bookings efficiently	event details, client information, and venue reservations require multiple manual activities	there is no centralized platform for the complete event lifecycle	overwhelmed and frustrated
PS-3	Venue Manager	manage venue availability accurately	the same venue may be assigned to multiple events	venue bookings need proper availability tracking and double-booking prevention	concerned and uncertain

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-4	Vendor Manager	coordinate vendors for different events	vendor details and event assignments need to be managed separately	events can require multiple vendors and services	overwhelmed and concerned
PS-5	Event Coordinator	communicate event information and reminders on time	reminders have to be handled manually	there is a need to notify clients before upcoming events	stressed and concerned
PS-6	Event Administrator	manage event cancellation requests systematically	cancellation requests require approval and status updates	cancellation decisions need a controlled approval process	frustrated and uncertain
PS-7	Event Coordinator	collect and manage client feedback	feedback information needs to be maintained along with event and client details	feedback is related to both events and clients	concerned about customer satisfaction
PS-8	Event Operations Manager	monitor event operations and performance	operational information is not easily visible in one place	event data needs to be organized into reports and dashboards	concerned and less confident in decision-making

2.2 Empathy Map Canvas

User Persona: Event Coordinator. Primary responsibility: manage event bookings, client requirements, venue reservations, vendor coordination, reminders, and event status updates.

- **Think & Feel:** Wants to manage events smoothly, avoid booking conflicts, and provide a reliable experience to clients.
- **Hear:** Receives requirements and updates from clients, vendors, venue managers, and event administrators.
- **See:** Event details, client information, venue availability, vendor assignments, cancellations, and feedback.
- **Say & Do:** Coordinates with stakeholders, updates event records, manages bookings, follows up on requirements, and monitors event progress.
- **Pain:** Manual coordination, fragmented information, venue double-booking risks, and difficulty tracking multiple event activities.
- **Gain:** Centralized event information, automated reminders and processes, accurate venue availability, better coordination, and improved operational visibility.

2.3 Brainstorming & Idea Prioritization

Ideas Considered

Idea	Approach	Key Limitation
Manual Registers	Maintain event, client, venue, and vendor details manually	Time-consuming and difficult to maintain
Spreadsheet Tracking	Track bookings and event information using spreadsheets	Limited automation and real-time coordination
Standalone Portal	Develop a dedicated portal for event management	Higher development and maintenance effort
Salesforce CRM	Centralize event operations on a Salesforce platform	Requires proper configuration and implementation

Final Selection: Salesforce CRM was selected for its **Automation** (reminders, approvals, status updates, and business processes), **Scalability** (growing events, users, records, and requirements), and **Real-Time Visibility** (centralized data, reports, and dashboards). Salesforce CRM provides the best fit for a centralized, automated, and scalable EventForce Management System.

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Stage	Customer Journey Stage	What Happens
1	Event Enquiry & Client Registration	Client requirements and contact details are captured in Salesforce.
2	Event Planning & Booking	Event details such as event type, date, budget, and status are created and managed.
3	Venue Selection & Reservation	Suitable venues are identified, availability is checked, and reservations are managed while preventing double bookings.
4	Vendor Coordination	Vendors and required services are assigned to events and their availability/status is coordinated.
5	Event Confirmation & Communication	Confirmed events trigger automated communication, including reminders sent to clients before the event.
6	Event Execution & Monitoring	Event progress is monitored through Salesforce records, reports, and dashboards.
7	Cancellation & Approval	Cancellation requests are submitted through the approval process, with status updates and notifications.
8	Feedback & Closure	Client feedback is captured after the event, and completed events are updated for tracking and future analysis.

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1 to FR-4	Event, client, venue, and vendor management
FR-5	Event–vendor assignment
FR-6	Venue availability and double-booking prevention
FR-7	Automated event reminders
FR-8	Event cancellation approval
FR-9	Feedback management
FR-10	Reports and dashboards
FR-11	Event status automation
FR-12	Data migration through Data Import Wizard

Non-Functional Requirements

NFR	Description
Usability	Lightning App for easy event management and navigation
Security	Profile-, role-, and permission-based access control
Reliability	Accurate automation, approvals, and venue booking validation
Performance	Efficient processing of event and operational data
Availability	Cloud-based Salesforce access for authorized users
Scalability	Supports growing events, clients, vendors, venues, and users
Maintainability	Flows, Apex, validation rules, and security can be monitored and updated
Data Integrity	Validation and controlled data migration to maintain accurate records

3.3 Data Flow Diagram

Main flow:

1. Client / Event Team enter client and event details.
2. Salesforce EventForce System validates and stores the data as Event, Client, Venue, and Vendor records.
3. Venue availability is checked, and the venue and vendors are assigned.
4. The event is confirmed and the automated 3-day reminder is sent.
5. Event execution and status updates take place, followed by feedback collection.
6. Reports and Dashboards present the resulting operational data.

Supporting flows:

- **Cancellation Request:** Event Coordinator → Cancellation Request → Approval Process → Approved / Rejected → Event Status Update → Notifications.
- **Venue Booking Validation:** Event → Apex Trigger → Venue Status Helper → Check Existing Venue & Event Date → Prevent Double Booking / Update Venue Availability.
- **Event Completion:** Event Date Passed → Scheduled Apex → Batch Process → Event Status = Completed.

Simple DFD representation: Clients / Event Coordinators / Vendor Managers / Venue Managers → Salesforce CRM – EventForce → Custom Objects (Event, Client, Vendor, Venue, Feedback, EventVendor) → Automation & Business Logic (Flows, Approval Process, Apex) → Operational Data & Status Updates → Reports & Dashboards → Event Operations & Decision Making.

3.4 Technology Stack

Layer	Technology
Platform	Salesforce CRM / Developer Edition
UI	Salesforce Lightning App
Database	Salesforce Custom Objects
Business Logic	Salesforce Flows, Formula Fields, Validation Rules
Approval	Salesforce Approval Process
Automation	Record-Triggered Flows, Apex Triggers
Processing	Batch Apex, Scheduled Apex
Security	Profiles, Roles, Permission Sets, Sharing Rules, OWD
Reporting	Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The EventForce Management System provides a strong fit between identified event-management problems and Salesforce capabilities, combining custom data structures, automation, Apex business logic, approval processes, security controls, and reporting.

Problem	Solution – EventForce Salesforce System	Fit / Benefit
Client, event, venue, and vendor information is difficult to manage centrally	Custom objects for Event, Client, Venue, Vendor, Feedback, and EventVendor	Centralized and structured event data
Event booking requires multiple manual activities	Salesforce Flows and automated processes	Reduces manual effort and improves efficiency
Risk of venue double booking	Apex Trigger and VenueStatusHelper	Validates venue availability and prevents double bookings
Vendor coordination is difficult to track	EventVendor junction object and Vendor records	Supports event–vendor assignment and coordination
Clients may not receive timely reminders	3-Day Reminder Flow	Automates reminder communication before confirmed events
Cancellation requests require controlled processing	Event_Cancellation_Process Approval Process	Structured approval and status updates
Client feedback needs to be connected with events	Feedback object with Event and Client relationships	Organized feedback management
Operational information is difficult to monitor	Reports and EventForce Operations Dashboard	Better visibility for monitoring and decisions
Different users require different levels of access	Profiles, Roles, Permission Sets, OWD, Sharing Rules	Controlled and secure data access

4.2 Proposed Solution

Parameter	Description
Problem	Manual and fragmented event management
Solution	Salesforce CRM
Innovation	Automated event reminders, venue validation, and cancellation approvals
Impact	Faster event coordination and improved operational visibility
Business Model	Centralized event planning and management
Scalability	Supports growing events, clients, vendors, venues, and users

4.3 Solution Architecture

The solution architecture consists of the following components:

- Event, Client, Vendor, and Venue objects
- EventVendor junction object
- Feedback object
- Validation Rules and Formula Fields

- Flows
- Approval Process
- Apex Triggers, Apex Classes, Batch Apex, and Scheduled Apex
- Profiles & Roles
- Permission Sets & Sharing Rules
- Data Import Wizard
- Lightning App
- Reports and Dashboards

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The project followed an Agile methodology with Epics broken into Stories and Story Points, sprint-based execution, and velocity calculation used for estimation.

Product Backlog and Sprint Schedule

Sprint	Functional Requirement (Epic)	User Story No.	User Story / Task	Story Points	Priority	Team Member
Sprint-1	Event Management	US-01	As an Event Coordinator, I want to create events with type, date, and status so that event information is standardized.	3	High	Member1
Sprint-1	Client & Venue Management	US-02	As an Event Coordinator, I want to associate a client and venue with an event so that coordination is centralized.	5	High	Member2
Sprint-2	Vendor Management	US-03	As a Vendor Manager, I want to assign multiple vendors to an event so that services can be coordinated.	5	High	Member3
Sprint-2	Notifications & Automation	US-04	As a Client, I want timely event reminders so that I know when my event is approaching.	3	High	Member4
Sprint-3	Approval Management	US-05	As an Event Coordinator, I want cancellation requests to follow an approval process so that cancellations are controlled.	5	High	Member1
Sprint-3	Venue Management & Apex	US-06	As a Venue Manager, I want double bookings prevented so that venue schedules remain accurate.	8	High	Member2
Sprint-4	Security & Access Control	US-07	As an Event Administrator, I want role-based access so that users see only appropriate information.	5	High	Member3

Sprint	Functional Requirement (Epic)	User Story No.	User Story / Task	Story Points	Priority	Team Member
Sprint-4	Reports & Dashboards	US-08	As Management, I want reports and dashboards so that event operations can be monitored.	5	Medium	Member4

Project Tracker and Velocity

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022		
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022		
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022		

6. PROJECT DEVELOPMENT PHASE

Phase 1: Requirement Analysis & Planning

The goal was to build an EventForce Management System in Salesforce to help event planners manage client bookings, vendor coordination, venue reservations, and feedback collection within a single CRM platform. The system automates event scheduling, cancellation approvals, and client reminders, while providing real-time visibility through reports and dashboards.

Functional Scope:

- Custom objects: Event, Client, Vendor, Venue, Feedback, and Event Vendor (junction object).
- Relationship modeling: Lookup, Master-Detail, and Many-to-Many (Event ↔ Vendor).
- Flows for reminders, feedback notifications, and approval updates.
- Validation Rules and Formula Fields for accurate data entry and event budget calculation.
- Approval Process for event cancellation requests with email alerts to coordinators and clients.
- Profiles, Roles, and Permission Sets for user-level access and security.
- Reports and Dashboards for event summaries, vendor performance, and upcoming event insights.

Stakeholder Mapping: Clients request event services, provide feedback, and view updates; Event Coordinators manage scheduling, client communication, and approval workflows; Vendors handle assigned services such as catering, decor, and logistics; Venue Managers manage venue availability and reservations; Event Administrators oversee system operations, security, and data monitoring.

Execution Roadmap: (1) Object & Field Setup; (2) Automation Flows; (3) Validation Rules & Formula Fields; (4) Profiles, Roles, and Permission Sets; (5) Approval Process; (6) Apex Classes & Triggers; (7) Reports & Dashboards.

Phase 2: Backend Development & Configurations

The Backend & Configuration phase built the core functional engine of the EventForce Management System. Using Salesforce Flows, Apex logic, and security configurations, it developed the automation backbone that manages events, clients, vendors, venues, and feedback efficiently.

Declarative tools such as Record-Triggered Flows, Validation Rules, Formula Fields, and Approval Processes were used extensively to automate booking confirmations, reminders, and cancellation approvals. Apex Classes and Triggers handled advanced business logic such as venue availability updates and prevention of double bookings, ensuring operational accuracy and scalability.

The phase also implemented Profiles, Roles, Permission Sets, and Sharing Rules to define user-level access and maintain data integrity and security across all modules. Altogether, this phase transformed the EventForce application from a static structure into a dynamic, automated, and secure CRM system capable of handling real-world event management workflows.

Milestone 1: Salesforce Account

Salesforce is a customer success platform designed to help you sell, service, market, analyze, and connect with your customers. Using standard products and features, you can manage relationships with prospects and customers, collaborate and engage with employees and partners, and store your data securely in the cloud.

Activity 1: Creating a Developer Account. A developer org was created at https://developer.salesforce.com/signup:

1. Open the sign-up page and enter First name, Last name, and Email.
2. Select Role: Developer, Company: College Name, Country: India, and enter the Postal Code.
3. Enter a unique Username that combines the name and company in the format username@organization.com (it need not be an actual email ID), then click Sign me up.

Activity 2: Account Activation.

1. Open the inbox of the email used for sign-up and click Verify Account (the email may take 5–10 minutes).
2. Set a password, answer the security question, and click Change Password.
3. You are redirected to the Salesforce Setup page.

Data Architecture

Custom Object	Fields	Notes
Event__c	Event Name, Event Date, Event Type, Event Status, Event Budget	
Client__c	Client Name, Email, Phone, Address, Country, City	
Vendor__c	Vendor Name, Email, Phone, Service Type, Status	
Venue__c	Venue Name, Address, Location (URL), Capacity, Availability Status	
Feedback__c	Feedback ID (Auto Number), Rating, Comments	
EventVendor__c	Junction object	Links Event ↔ Vendor (many-to-many)

Relationship	Type
Event → Client	Lookup
Event → Venue	Lookup
Feedback → Event	Lookup
Feedback → Client	Lookup
EventVendor → Event	Master-Detail
EventVendor → Vendor	Master-Detail

Milestone 2: Objects

Salesforce objects are database tables that store data specific to an organization. An object consists of fields (columns) and records (rows). Five custom objects were created in this application: Event, Client, Vendor, Venue, and Feedback.

Activity 1: Create the Event object.

1. From Setup, open Object Manager, click Create, and select Custom Object.
2. Enter Label "Event", Plural Label "Events", and Record Name "Event Name" with data type Text.
3. In Optional Features, select Allow Reports, Allow Activities, and Track Field History.
4. In Deployment Status, ensure Deployed is selected; in Search Status, select Allow Search.
5. In Object Creation Options, select Add Notes and Attachments related list to default page layout.
6. Leave everything else as is and click Save.

Activity 2: Create the Client object.

1. Click the gear icon and select Setup, then click the Object Manager tab beside the Home tab.
2. Click the Create drop-down at the extreme right and select Custom Object.
3. On the Custom Object Definition page enter Label "Client", Plural Label "Clients", and Record Name "Client Name" with data type Text.
4. Check the Allow Reports and Allow Search checkboxes.
5. In Object Creation Options select Add Notes and Attachments related list to default page layout.
6. Click Save.

Activity 3: Create the Vendor object.

1. Click the gear icon and select Setup, then click the Object Manager tab beside the Home tab.
2. Click the Create drop-down at the extreme right and select Custom Object.
3. On the Custom Object Definition page enter Label "Vendor", Plural Label "Vendors", and Record Name "Vendor Name" with data type Text.
4. Check the Allow Reports and Allow Search checkboxes.
5. In Object Creation Options select Add Notes and Attachments related list to default page layout.
6. Click Save.

Activity 4: Create the Venue object.

1. Click the gear icon and select Setup, then click the Object Manager tab beside the Home tab.
2. Click the Create drop-down at the extreme right and select Custom Object.
3. On the Custom Object Definition page enter Label "Venue", Plural Label "Venues", and Record Name "Venue Name" with data type Text.
4. Check the Allow Reports and Allow Search checkboxes.
5. In Object Creation Options select Add Notes and Attachments related list to default page layout.
6. Click Save.

Activity 5: Create the Feedback object.

1. Click the gear icon, select Setup, open Object Manager, and choose Create → Custom Object.

2. Enter Label "Feedback", Plural Label "Feedbacks", and Record Name "Feedback" with data type Auto Number.
3. Under Display Format enter "F-{0000}" and enter the starting number 0.
4. Check the Allow Reports and Allow Search checkboxes.
5. Select Add Notes and Attachments related list to default page layout and click Save.

Milestone 3: Tabs

Tabs in Salesforce help users view information at a glance by displaying the data of objects and other web content in the application. Standard object tabs display data related to standard objects, while custom object tabs display data related to custom objects and look and function just like standard tabs. **Activity 1: Create the Event tab.**

1. On the Home tab, enter Tabs in Quick Find and select Tabs.
2. Under Custom Object Tabs, click New.
3. For Object, select Event.
4. For Tab Style, select any icon and leave all defaults as they are.
5. Click Next, Next, and Save.

Activities 2–5: Client, Vendor, Venue, and Feedback tabs. The tabs for the Client, Vendor, Venue, and Feedback objects were created in exactly the same way: Home tab → Tabs in Quick Find → Custom Object Tabs → New → select the object → select any Tab Style icon → leave the defaults → Next, Next, and Save.

Milestone 4: Fields and Relationships

Fields represent the columns of an object and store the data values required for a record. There are two types. **Standard fields** (such as Created By, Last Modified By, Owner, and the record name field created with the object) cannot be deleted or edited and are always required. **Custom fields** are added by the administrator or developer to meet business requirements and may or may not be required.

Activity 1: Fields for the Event object. Click the gear icon → Setup → Object Manager → Event → Fields & Relationships → New. Before creating a field, search to make sure a similar one does not already exist. Choose the data type (for example, Picklist), enter the Field Label (for example, "Event Type"), select "Enter values, with each value separated by a new line", enter the values, and click Next, Next, and Save. The remaining fields of each object were created in the same way, choosing the data types carefully:

Object	Field	Data Type	Values / Notes
Event	Event Type	Picklist	Wedding, Corporate, Birthday, Anniversary, Festival, Concert, Other

Object	Field	Data Type	Values / Notes
Event	Event Date	Date	
Event	Event Status	Picklist	Planned, Confirmed, Completed, Pending Cancellation, Canceled, Rejected
Event	Event Budget	Formula (Currency)	Calculated from Event Type (formula below)
Client	Email, Phone	Email, Phone	
Client	Address	Text Area	
Client	Country	Picklist	India, Philippines, Saudi Arabia, USA, Switzerland, Thailand, Maldives, Dubai, Sri Lanka, Bangkok, Singapore, Myanmar, France, Nepal
Client	City	Picklist	Hyderabad, Mumbai, Delhi, Bangalore, Chennai; Alaminos, Angeles City, Palayan, Quezon City, San Juan; Riyadh, Jeddah, Tayma, Dammam, Medina; New York, Los Angeles, Chicago, Houston, Columbus; Geneva, Basel, Lausanne, Bern, Lucerne
Vendor	Service Type	Multi-Select Picklist	Catering, Decor, Photography, Videography, Lighting, Stage Setup, Makeup Artist, DJ/Music, Transportation, Hosting/Anchor
Vendor	Email, Phone	Email, Phone	
Vendor	Status	Picklist	Available, Booked, Cancelled
Venue	Address	Text Area	
Venue	Location	URL	
Venue	Capacity	Number	
Venue	Availability Status	Picklist	Available, Reserved, Not Available
Feedback	Rating	Picklist	1, 2, 3, 4, 5
Feedback	Comments	Long Text	

Event Budget formula (return type Currency):

```
CASE(
  TEXT(Event_Type__c),
  "Wedding", 50000,
  "Corporate", 30000,
  "Birthday", 10000,
  "Anniversary", 20000,
  "Festival", 60000,
  "Concert", 40000,
  "Other", 15000,
  0
)
```

Activity 2: Fields for the Client object. Object Manager → Client → Fields & Relationships → New:

1. Select Email as the data type, click Next, enter the Field Label "Email", click Next, Next, then Save & New.
2. Select Phone as the data type with the Field Label "Phone"; click Next, Next, then Save.
3. Select Text Area as the data type with the Field Label "Address"; click Next, Next, then Save.
4. Select Picklist as the data type with the Field Label "Country"; enter the country values (one per line) and Save.
5. Select Picklist as the data type with the Field Label "City"; enter the city values (one per line) and Save.

Activity 3: Fields for the Vendor object.

1. Select Multi-Select Picklist with the Field Label "Service Type" and enter the service values, one per line.
2. Select Email with the Field Label "Email"; click Next, Next, then Save & New.
3. Select Phone with the Field Label "Phone"; click Next, Next, then Save.
4. Select Picklist with the Field Label "Status" and enter the values Available, Booked, and Cancelled.

Activity 4: Fields for the Venue object.

1. Select Text Area with the Field Label "Address"; click Next, Next, then Save.
2. Select URL with the Field Label "Location"; click Next, Next, then Save.
3. Select Number with the Field Label "Capacity"; click Next, Next, then Save.
4. Select Picklist with the Field Label "Availability Status" and enter the values Available, Reserved, and Not Available.

Activity 5: Fields for the Feedback object. Select Picklist with the Field Label "Rating" and enter the values 1 to 5; then select Long Text with the Field Label "Comments" and click Next, Next, then Save.

Event Budget formula field. On the Event object select Formula as the data type, enter the Field Label "Event Budget", select the return type Currency, click Next, insert the formula shown above, check the syntax, and click Next, Next, then Save.

Activity 6: Relationships. For each relationship: Setup → Object Manager → select the object → Fields & Relationships → New → select the relationship type → choose the related object → enter the field label → Next, Next, Next, and Save.

Event → Venue (Lookup). From Setup go to Object Manager and select the Event object. On the sidebar click Fields & Relationships, click New, select Lookup Relationship, and click Next. Choose the related object Venue, click Next, give the field label "Venue", and click Next, Next, Next, and Save.

Event ↔ Vendor (Many-to-Many). Salesforce does not allow a direct many-to-many relationship, so a junction object was created: Object Manager → Create → Custom Object with Label "Event Vendor" and Object Name EventVendor__c. On this object two Master-Detail relationships were added: first, Master-Detail to Event (field label "Event", Save & New); second, Master-Detail to Vendor (field label "Vendor", Save).

Event → Client (Lookup). On the Event object choose Fields & Relationships → New → Lookup Relationship, select the related object Client, give the field label "Client", and click Next, Next, Next, and Save.

Feedback → Event and Feedback → Client (Lookup). On the Feedback object two lookup relationships were created in the same way: the first to Event (field label "Event") and the second to Client (field label "Client").

Activity 7: Lookup filter. *Scenario:* in an event management app each Event belongs to a Client. When creating Feedback, after a Client is selected, the Event lookup should show only that client's events (for example, if Ramesh is chosen, only Ramesh's events appear).

1. Click the gear icon → Setup → Object Manager and open the Feedback object (Feedback__c).
2. Click Fields & Relationships, open the Event lookup field (Event__c), and click Edit.
3. Scroll to the Lookup Filter section and click Show Filter Settings.
4. Build the filter criteria: Field – Event: Client__c; Operator – equals; Value – select the Field radio button and choose Feedback: Client__c.
5. Check Enable this Filter and click Save.

Milestone 5: Validation Rules

Validation rules are applied when a user tries to save a record and check whether the data meets specified criteria. If the criteria are not met, the rule displays an error message and prevents the record from being saved until the issue is resolved.

Activity 1: Validation rule on Client__c. Go to Setup → Object Manager → Client → Validation Rules → New. Enter the Rule Name "Email_Valid_Address", select Active, and insert the following error condition formula. Enter the error message "Please Enter Valid Email Address", set the error location to Field (Email), and click Save.

```
NOT(REGEX(Email__c, "^[a-zA-Z0-9._]+@[a-zA-Z0-9.]+\\.[a-zA-Z]{2,}$"))
```

Milestone 6: Approval Process

An approval process was created for event cancellation approval. The Profiles, Roles, and Users milestones must be completed before implementing it.

Step 1: Create the Classic Email Templates. Setup → Email Templates → Classic Email Templates → New Template → type Text → Next. Folder: Unfiled Public Email Templates; encoding UTF-8. Four templates were created:

Template 1 – Event Cancellation Request Notification. Subject: Approval Request: Cancel Event {!Event__c.Name}

```
Hello!
An approval request has been submitted to cancel the event:
- Event Name: {!Event__c.Name}
- Event Date: {!Event__c.Event_Date__c}
Thank you,
EventForce Management System
```

Template 2 – Email to Client After Cancellation. Subject: Event Cancellation Notice – {!Event__c.Name}

```
Hello!
We would like to inform you that the event has been canceled.
Event Name: {!Event__c.Name}
Date: {!Event__c.Event_Date__c}
If you have any questions or need assistance, please contact us.
Thank you for your understanding,
Event Management Team
```

Template 3 – Approval Notification to Event Owner. Subject: Event Cancellation Approved: {!Event__c.Name}

```
Hello {!Event__c.OwnerFullName}
Your cancellation request for the event {!Event__c.Name} has been approved.
Event Date: {!Event__c.Event_Date__c}
The event status has been updated to Canceled.
Thank you,
EventForce Management System
```

Template 4 – Rejection Notification to Event Owner. Subject: Event Cancellation Rejected: {!Event__c.Name}

```
Hello {!Event__c.OwnerFullName},
Your cancellation request for the event {!Event__c.Name} has been rejected.
Event Date: {!Event__c.Event_Date__c}
The event status has been reverted to Confirmed.
Thank you,
EventForce Management System
```

Step 2: Create the Approval Process. Setup → Approval Processes → Event object → Create New Approval Process → Use Standard Setup Wizard.

1. **Basic settings:** Name "Event_Cancellation_Process" (the unique name auto-fills).
2. **Entry criteria:** choose "Criteria are met" with Event Status Equals Pending Cancellation.
3. **Approver:** Option 1 – select "Automatically assign using user or queue" and choose a specific user (Manager). Option 2 – select "Automatically assign to the manager of the user who submitted the record" (each user must have a manager in the User record). Click Next.
4. **Email template:** select Event Cancellation Request Notification.
5. **Approval page fields:** select the fields approvers will see (Event Name, Owner, Client, Last Modified By, Created By, Event Budget, Event Date, Event Status, Event Type, Venue) and order them with the Up/Down arrows.
6. **Initial submitters:** select the Event Owner and click Save.
7. **Initial submission actions:** Add New → Email Alert with description "Alert - Event Cancellation Request", object Event__c, template Event Cancellation Request Notification, recipient role Event Coordinator, and From Email Address set to the current user's email.
8. **Final approval actions:** Field Update "Event Status Update" (Event Status = Canceled), and Email Alert "Alert - Cancellation Approved" using the template Approval Notification to Event Owner, sent to the Event Owner.
9. **Final rejection actions:** Email Alert "Alert - Cancellation Rejected" using the template Rejection Notification to Event Owner, sent to the Event Owner, and Field Update "Event Status To Rejected" (Event Status = Rejected).
10. **Approval step:** Add New Step named "Manager Review"; all records enter this step; the approver is a specific user (or a related user).
11. **Activate:** open the Approval Process Detail Page and click Activate.

Milestone 7: Flows

A flow is a tool that allows you to automate business processes, collect and update data, and guide users through a series of screens or steps. Flows are built using a visual interface and require no coding knowledge.

Activity 1: Flow to send a 3-day reminder email to the client. *Scenario:* when an Event is created or updated with Status = Confirmed and a valid Client with an email address, the system automatically sends a reminder email to the Client 3 days before the Event Date.

1. Go to Setup, type Flow in Quick Find, click Flows, and select New Flow → Record-Triggered Flow → Create.

2. Under Object select Event, and select "A record is created or updated".
3. Enter the condition: Field Event Status, Operator Equals, Value Confirmed. Select Optimize the flow for "Actions and Related Records" and click Done.
4. Click the Start element and Add Schedule Path. Enter the Path name "3_Days_Before" (the API name populates automatically), set Time Source to Event__c: Event Date, Offset Number 3, and Offset Option "Days Before".
5. From the Toolbox, create a New Resource of type Text Template with API Name **Subject** and the body "Reminder: Your Event {!$Record.Name} is in 3 days" (plain text).
6. Create a second Text Template with API Name **Body**: "Hello {!$Record.Client__r.Name}, This is a reminder that your event {!$Record.Name} will take place on {!$Record.Event_Date__c}. Venue: {!$Record.Venue__r.Name}. Type: {!$Record.Event_Type__c}. We look forward to seeing you! - EventForce Team" (plain text).
7. Under the 3_Days_Before path click the + symbol, select Action, choose Send Email, and enter the label "Alert_Client_3Day_Reminder".
8. Select the Recipient Address List as Client Email, the CC Recipient Address List as Event Owner, choose Compose Email Content, and select the Subject and Body resources.
9. Click Save, enter the Flow Label "Client Reminder - 3 Days Before", and click Save & Activate.

Milestone 8: Apex Classes

Scenario: when an Event is confirmed with a Venue, mark Venue Availability = "Reserved"; when the event is canceled, mark it "Available". Click the gear icon and open the Developer Console. Choose File → New → Apex Class, name it VenueStatusHelper, write the code below, and save with Ctrl+S. Then choose File → New → Apex Trigger, name it EventTrigger13, select the object Event__c, click Submit, and write the trigger code.

```
public with sharing class VenueStatusHelper {
  public static void updateVenueStatus(List<Event__c> events){
    List<Venue__c> venues = new List<Venue__c>();
    for(Event__c ev : events){
      if(ev.Venue__c != null){
        if(ev.Event_Status__c == 'Confirmed'){
          venues.add(new Venue__c(Id=ev.Venue__c,
            Availability_Status__c='Reserved'));
        } else if(ev.Event_Status__c == 'Canceled'){
          venues.add(new Venue__c(Id=ev.Venue__c,
            Availability_Status__c='Available'));
        }
      }
    }
    if(!venues.isEmpty()) update venues;
  }
}
```

```
trigger EventTrigger13 on Event__c (after insert, after update) {
  VenueStatusHelper.updateVenueStatus(Trigger.new);
}
```

Milestone 9: Apex Trigger

Scenario: do not allow two events at the same Venue on the same date. In the Developer Console choose File → New → Apex Trigger, name it PreventDoubleBooking, select the object Event__c, click Submit, write the code below, and save with Ctrl+S. The trigger collects the venues of the incoming events, loads the existing events at those venues, and raises an error when another event has the same venue and date.

```
trigger PreventDoubleBooking on Event__c (before insert, before update) {
  Set<Id> venueIds = new Set<Id>();
  for(Event__c ev : Trigger.new){
    if(ev.Venue__c != null) venueIds.add(ev.Venue__c);
  }
  Map<Id, List<Event__c>> venueEventMap = new Map<Id, List<Event__c>>();
  for(Event__c e : [SELECT Id, Venue__c, Event_Date__c
                    FROM Event__c WHERE Venue__c IN :venueIds]){
    if(!venueEventMap.containsKey(e.Venue__c)){
      venueEventMap.put(e.Venue__c, new List<Event__c>());
    }
    venueEventMap.get(e.Venue__c).add(e);
  }
  for(Event__c ev : Trigger.new){
    if(ev.Venue__c != null && venueEventMap.containsKey(ev.Venue__c)){
      for(Event__c existing : venueEventMap.get(ev.Venue__c)){
        if(existing.Event_Date__c == ev.Event_Date__c && existing.Id != ev.Id){
          ev.addError('This Venue is already booked on this date.');
        }
      }
    }
  }
}
```

Milestone 10: Batchable and Schedulable Asynchronous Apex

Scenario: mark all past events as Completed every night. In the Developer Console, two Apex classes were created (File → New → Apex Class): the batch class BatchCompleteEvents, which queries events whose date is before today and whose status is not Completed and sets their status to Completed, and the schedulable class ScheduleCompleteEvents, which runs the batch with a scope size of 200.

```
global class BatchCompleteEvents implements Database.Batchable<sObject> {
  global Database.QueryLocator start(Database.BatchableContext bc){
    return Database.getQueryLocator(
      'SELECT Id, Event_Date__c, Event_Status__c FROM Event__c WHERE
       Event_Date__c < TODAY AND Event_Status__c != \'Completed\'');
  }
  global void execute(Database.BatchableContext bc, List<Event__c> scope){
    for(Event__c ev : scope){ ev.Event_Status__c = 'Completed'; }
    update scope;
  }
  global void finish(Database.BatchableContext bc){
    System.debug('Past events marked as Completed');
```

```
  }
}

global class ScheduleCompleteEvents implements Schedulable {
  global void execute(SchedulableContext sc){
    Database.executeBatch(new BatchCompleteEvents(), 200);
  }
}
```

Scheduling the batch job from Setup:

1. Click the gear icon → Setup, type Apex Classes in Quick Find, and click Apex Classes.
2. Click the Schedule Apex button at the top.
3. Enter the Job Name "Daily Event Completion" and select the Apex Class ScheduleCompleteEvents.
4. Set the Frequency to Weekly and select All Days; set the Preferred Start Time to 08:00 PM.
5. Click Save. Salesforce now runs BatchCompleteEvents every day at 8 PM and marks past events as Completed.

Phase 3: UI/UX Development & Customization

This phase created a simple, user-friendly interface: a custom Lightning App organizing all modules (Events, Clients, Vendors, Venues, and Feedback) in one workspace, together with Reports and Dashboards that visualize event schedules, vendor performance, and client feedback.

Milestone 11: The Lightning App

Apps in Salesforce are groups of tabs that work together as a unit; an app has a name, a logo, and a particular set of tabs. **Activity 1: Create the Event Planner Lightning App.**

1. From Setup, enter App Manager in Quick Find, select App Manager, and click New Lightning App.
2. Enter "Event Planner" as the App Name, upload an image, and click Next.
3. Under App Options and Utility Items, leave the defaults and click Next.
4. From Available Items select Event, Client, Vendor, Venue, Feedback, Reports, and Dashboards and move them to Selected Items; click Next.
5. From Available Profiles select System Administrator and move it to Selected Profiles; click Save & Finish.

To verify, click the App Launcher, type Event Planner, and select the app. The App Launcher displays the available apps, the App Name shows the selected app, and the navigation menu displays the tabs available inside the app.

Milestone 12: Reports

Activity 1: Create a report folder. In the App Launcher open Reports, click New Folder, and enter the folder label "EventForce Report" (the unique name populates automatically). **Activity 2: Share the folder.** In the All folders view, open the drop-down arrow for the EventForce Report folder, click Share, select Roles, choose "Event Coordinator" and "Vendor Manager" with View access, and click Share and Done.

Activity 3: Create the report. Before creating a report, at least 10 records should be created in every object, filling every field of each record. **Report 1: Upcoming Events – Summary by Month** shows upcoming events and their counts by month.

1. Go to the App Launcher → Reports tab → New Report; select the category All, search for "Events with Client & Venue", and click Start Report.
2. In the Columns section select Event Name, Event Date, Event Type, Client Name (Client__r.Name), Venue Name (Venue__r.Name), and Event Budget; remove unnecessary fields and toggle Update Preview Automatically.
3. Under Filters apply: Show Me = All Events, Event Date ≥ TODAY (or Next 30 Days), and Event Status ≠ Canceled.
4. Under Group Rows select Event Date and group by Calendar Month.
5. Add Summary: Row Count and SUM of Event Budget (total budget per month).
6. Add Chart: type Column or Line, X-axis Event Date (Calendar Month), Y-axis Row Count or SUM(Event Budget).
7. Click Save, name the report "Upcoming Events by Month", select the folder EventForce Reports, and click Save and Run.

Milestone 13: Dashboards

Activity 1: Create the EventForce Operations Dashboard.

1. Click the Dashboards tab in the EventForce Management System application and click New Dashboard.
2. Name the dashboard "EventForce Operations Dashboard" and click Create.
3. Click +Widget and select the Upcoming Events by Month report.
4. Set Chart: Donut Chart; Max Values Displayed: 6; Subtitle: "Upcoming Events Overview"; Widget Theme: Light; click Save.

Phase 4: Data Migration, Testing & Security

This phase prepared and secured the system before deployment. Records for Events, Clients, Vendors, Venues, and Feedback were imported using the Data Import Wizard after pre-validation checks to avoid duplicates. User accounts were created for Event Admin, Event Coordinator,

Vendor Manager, and Client with specific Profiles and Roles. Security used Profiles, Role Hierarchy, Permission Sets, and Sharing Rules, with Organization-Wide Defaults (OWD) set to Private and controlled access through sharing rules such as Event_Sharing_For_Vendors. Testing validated data accuracy, automation performance, and user permissions.

Milestone 14: Profiles

A profile is a collection of settings and permissions that define what a user can do in Salesforce. It controls object permissions, field permissions, user permissions, tab settings, app settings, Apex class access, Visualforce page access, page layouts, record types, login hours, and login IP ranges. A profile can be assigned to many users, but a user can have only one profile at a time.

Activity 1: Event Admin profile. From Setup enter Profiles in Quick Find, click New Profile, select the existing profile System Administrator, enter the profile name "Event Admin", and click Save. System Administrator is used as the base because it already has Modify All Data, Customize Application, and full CRUD access on all objects, so Event Admin inherits full access; permissions can be removed if needed.

Activity 2: Event Coordinator profile.

1. From Setup enter Profiles in Quick Find and click New Profile.
2. Select the existing profile Standard Platform User, enter the profile name "Event Coordinator", click Save, and click Edit.
3. Set the Custom App setting to Event Planner as default.
4. Under Custom Object Permissions give access: Event – Create/Read/Edit/Delete; Client – Read/Edit; Vendor – Read; Venue – Read; Feedback – Create/Read.
5. Set the session timeout to "2 hours of inactivity".
6. Set the password policy: user passwords expire in "never expires" and minimum password length "8"; click Save.

Activity 3: Vendor Manager profile. Create the profile from Standard Platform User in the same way, with the profile name "Vendor Manager" and the same app, session, and password settings. Custom Object Permissions: Vendor – Create/Read/Edit/Delete; Event, Venue, Client, and Feedback – Read Only.

Activity 4: Client Profile. Create the profile from Standard Platform User with the profile name "Client Profile" and the same app, session, and password settings. Custom Object Permissions: Event – Read Only (for their own events); Feedback – Create/Read (to give feedback); Vendor and Venue – No Access.

Profile	Custom Object Permissions (summary)
Event Coordinator	Event: Create/Read/Edit/Delete; Client: Read/Edit; Vendor: Read; Venue: Read; Feedback: Create/Read

Profile	Custom Object Permissions (summary)
Vendor Manager	Vendor: Create/Read/Edit/Delete; Event, Venue, Client, Feedback: Read Only
Client Profile	Event: Read Only (own events); Feedback: Create/Read; Vendor/Venue: No Access

Milestone 15: Roles

Roles determine which users have access to certain data and functions and define the reporting hierarchy of the organization; users with higher roles have greater access to data and more control over the system.

Activity 1: Create the Event Admin role.

1. From Quick Find search for Roles and click the Roles option, then select Set Up Roles.
2. Click Expand All and click Add Role under CEO.
3. Give the Label "Event Admin" (the role name populates automatically) and click Save.

Activities 2–4: Create the roles under Event Admin. Below Event Admin, click Add Role, enter the label "Event Coordinator" (the role name populates automatically), and click Save. Follow the same steps to create the roles "Vendor Manager" and "Client" under the Event Admin role.

Milestone 16: Users

A user is anyone who logs in to Salesforce, such as employees who need access to the company's records. Every user has a user account that identifies the user, and the account settings determine which features and records the user can access. A Developer Org license can be used by only two users at a time, so if no Salesforce license is available, deactivate a user who holds one or change the license type.

Activity 1: Create the Event Admin user.

1. From Setup, enter Users in the Quick Find box and select Users.
2. Click New User.
3. Fill in First Name (Sizzler), Last Name (Jaligam), Alias, Email (a personal email ID), a unique Username in the form text@text.text, and Nickname.
4. Select Role: Event Admin, User License: Salesforce, and Profile: Event Admin.
5. Click Save.

Activity 2: Create the other users. Repeat the steps above to create users with the roles Event Coordinator, Vendor Manager, and Client; the user license Salesforce Platform; and the matching profiles Event Coordinator, Vendor Manager, and Client Profile.

Milestone 17: Permission Set

A permission set is a collection of settings and permissions that grants access to tools, features, and objects without changing the user's profile. **Activity 1: Create the Feedback Manager permission set.**

1. Go to Setup, type Permission Set in Quick Find, select Permission Sets, and click New.
2. Give the Label "Feedback Manager" and click Save.
3. Open Object Settings, search for the Feedback object, click Edit, and under Object Permissions enable Read, Create, Edit, and Delete; click Save.
4. Click Manage Assignments → Add Assignment, select the Event Coordinator role user, and click Next and Assign.

Milestone 18: Sharing Settings

Sharing settings control how records are accessed and shared within the organization and are crucial for maintaining data security and privacy. **Organization-Wide Defaults (OWD)** define the baseline level of access to records for each object, which can then be extended by Role Hierarchy, Sharing Rules, Manual Sharing, and Apex Sharing. The OWD options are:

- **Private:** only the record owner and users above them in the role hierarchy can see or edit the record.
- **Public Read Only:** all users can view the records, but only the owner and those above in the hierarchy can edit them.
- **Public Read/Write:** all users can view and edit records regardless of ownership, which suits free collaboration.
- **Controlled by Parent:** for child objects, access is controlled by the parent record's sharing settings.

Activity 1: Configure OWD. Go to Setup → Sharing Settings → Edit; in Organization-Wide Defaults select the Event object, click Edit, change Default Internal Access and Default External Access to Private, and click Save.

Sharing rules share records based on conditions. They are created for objects whose OWD is Public Read Only or Private, because sharing rules can only extend access and never restrict it. There are two types: owner-based and criteria-based sharing rules. **Activity 1: Create a sharing rule.**

1. Go to Sharing Settings, scroll to the Event object, and click New to create a sharing rule.
2. Enter the Label "Event_Sharing_For_Vendors" (the rule name populates automatically).
3. In step 3, select the records to be shared: members of Roles → Event Coordinator.
4. In step 4, share with Roles → Vendor Manager.
5. In step 5, set the access level to Read Only, then click Save.

7. FUNCTIONAL & PERFORMANCE TESTING

During testing, screenshots were captured from Salesforce to validate event and venue creation, double-booking prevention, event status updates, batch processing, scheduled reminders, and dashboard analytics. All features were verified to ensure correct functionality and performance. The testing activities covered:

- **Data accuracy** – validation rules and the pre-validated Data Import Wizard load were checked to avoid duplicates and maintain consistency.
- **Automation performance** – the 3-day reminder Flow, the cancellation Approval Process, the venue availability and double-booking triggers, and the nightly batch job for completing past events.
- **User permissions** – the Profiles, Roles, Permission Sets, OWD, and Sharing Rules assigned to the Event Admin, Event Coordinator, Vendor Manager, and Client users.
- **Reporting** – the Upcoming Events by Month report and the EventForce Operations Dashboard.

8. ADVANTAGES & DISADVANTAGES

Advantages

- **Centralized Data Management** – Event, Client, Vendor, Venue, Feedback, and EventVendor information is managed within Salesforce.
- **Process Automation** – Flows automate reminders and other processes, reducing manual effort.
- **Prevents Double Booking** – The Apex Trigger and VenueStatusHelper validate venue availability.
- **Controlled Cancellation Process** – The Approval Process provides structured handling of cancellation requests.
- **Improved Operational Visibility** – Reports and Dashboards cover event schedules, vendor activities, and feedback.
- **Secure Access** – Profiles, Roles, Permission Sets, OWD, and Sharing Rules control access to records.
- **Scalable Solution** – The platform can support future growth and additional requirements.

- **Better Data Quality** – Validation Rules and pre-validation during migration keep data accurate and consistent.

Disadvantages

- **Developer Edition Limitation** – The project was implemented in a Developer Edition for academic purposes and was not connected to a production environment.
- **Production Deployment Not Performed** – Migration to production was outside the scope of this implementation.
- **Deployment Requires Additional Tools** – Real-world deployment may require sandboxes, Change Sets, Salesforce DX, or DevOps/CI-CD tools.
- **Configuration Complexity** – Managing Flows, Apex, Approval Processes, and security requires Salesforce knowledge.
- **Ongoing Maintenance Required** – Flows, Apex jobs, approval processes, validation rules, and sharing settings need regular monitoring.

9. CONCLUSION

The EventForce Management System successfully demonstrates how Salesforce can be used to streamline and automate event planning and management operations. The project brings Events, Clients, Vendors, Venues, Feedback, and EventVendor data into a centralized platform.

The implementation combines Salesforce Lightning, Flows, Validation Rules, Formula Fields, Approval Processes, Apex Triggers, Apex Classes, Batch Apex, Scheduled Apex, security controls, Reports, and Dashboards to address key business requirements. Automation supports event reminders, cancellation approvals, venue availability management, double-booking prevention, and event completion.

The project also demonstrates the importance of data migration, testing, security, documentation, and maintenance in a Salesforce implementation. Although the solution was developed and tested in a Developer Edition Org and production deployment was not performed, the project reflects real-world Salesforce implementation practices and provides a foundation for future scalability and enhancement.

10. FUTURE SCOPE

The EventForce Management System can be further enhanced to support larger-scale event operations and improve automation, integration, and user experience:

- **Production Deployment** – Deploy the solution to a production Salesforce environment using appropriate deployment tools.

- **Advanced Event Automation** – Extend automation for additional event planning and operational activities.
- **Enhanced Vendor Management** – Introduce more advanced vendor tracking and performance management.
- **Advanced Analytics** – Add more reports and dashboards for events, venues, vendors, and client feedback.
- **External Integrations** – Integrate Salesforce with external systems and services required for event operations.
- **Mobile Accessibility** – Enhance the solution for convenient event management through mobile devices.
- **Scalability Enhancements** – Support larger numbers of events, clients, vendors, venues, and users.
- **Continuous Maintenance & Optimization** – Regularly improve Flows, Apex, validation rules, and sharing settings as requirements evolve.

These enhancements can help transform the current implementation into a more comprehensive and enterprise-ready event management CRM solution.

11. APPENDIX

- **A. Custom Objects:** Event, Client, Vendor, Venue, EventVendor, Feedback
- **B. Automation:** Flows, Validation Rules, Approval Process, Apex Triggers & Classes
- **C. Processing:** Batch Apex and Scheduled Apex
- **D. Security:** Profiles, Roles, Permission Sets, OWD, Sharing Rules
- **E. Data Migration:** Salesforce Data Import Wizard
- **F. UI & Analytics:** Lightning App, Reports & Dashboards
- **G. Testing & Documentation:** Configuration testing, security testing, automation testing, and project documentation

Thank You
